

CASE STUDY

CUSTOMER

KINECOR

LOCATION

ALBERTA, CANADA / 2008

EQUIPMENT

DETROIT DIESEL ENGINE

APPLICATION

LUBE OIL

**PROVEN
RESULTS**

**OIL CHANGE
INTERVALS
REDUCED
BY HALF**

**MAINTENANCE
COSTS
REDUCED**

CHALLENGE

Improve the cleanliness of the lube oil to protect close tolerance components and extend oil change intervals.

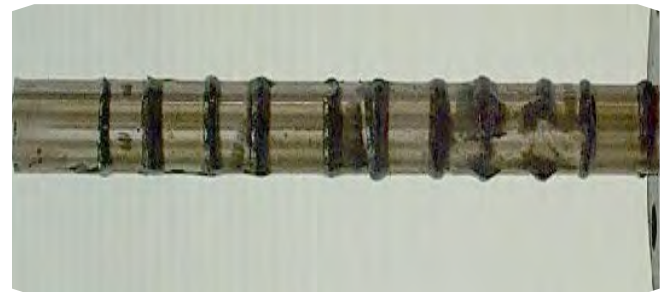

SOLUTION

Install an OEI ADD-Vantage 9000 designed as a direct-replacement to the existing OEM spin-on filter.

RESULTS

After deploying the OEI filter, oil change intervals were reduced to half as often, and maintenance costs were significantly reduced.

The OEI magnetic filter is easily cleaned and the trapped contamination analyzed for component wear identification allowing predictive maintenance planning.
