FAILURES
FOR
8 YEARS
&
434,000 KM

“The truck’s reliability is the most important thing to me. This is my truck and my livelihood,”

- Rob Bekker, Owner Operator

CHALLENGE

In 2006, Rob Bekker purchased a used Kenworth semi-truck with a CAT 3406 engine with 70,000 km runtime. Running up to 11 hours a day, with extended idle times throughout the winter, the truck needed a filter that would allow Bekker to maintain a 10,000 km oil change interval.

SOLUTION

Install an OEI ADD-Vantage 9000 filter in place of the OEM filter to remove wear contamination down to sub-micron levels, and in turn protect the engine and maintain the 10,000 km oil change interval

RESULTS

After eight years of operation and 434,000 km on the engine, there were no engine component failures.

The ADD-Vantage 9000 is effectively removing contamination previously missed by the traditional filter. The cost savings of eliminating filter replacements is \$200 per year.
