REVENUE

“ Since installing the OEI magnetic filter our product rejection from metal contamination has been reduced considerably. Our product quality and production has increased significantly. We have installed 6 more magnetic filters and are very appreciative of your product.

- Maintenance Manager

CHALLENGE

Reduce the incidences of product being rejected due to ferrous contamination.

SOLUTION

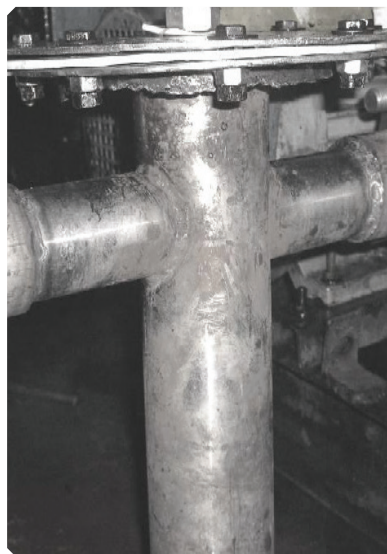

Install an OEI magnetic filter element in the existing T-strainer filter at the end of the product line.

RESULTS

The photos show 44 grams of contamination captured after 2 days of operation.

The OEI filter succeeded in improving the product quality enough to surpass quality standards and reduce product rejection.

Since installation of the original OEI magnetic filter element, the facility has installed 6 more OEI filters throughout the facility to improve the quality of their product at all stages of manufacturing.
