CHALLENGE

A high level of product rejection prior to packaging.

SOLUTION

PT. Sinarmentari Indoprima, the Indonesia distributor for OEI, recommended installing 2 magnetic filter rods inline of the product flow.

RESULTS

The adjacent photos show the results from using the OEI magnetic filters. A substantial amount of ferrous metal was removed from the granular sugar prior to packaging.

Since installing the OEI magnetic filters product rejection has decreased considerably. Other sites in the factory are being evaluated for use of the OEI magnetic filters.
